REMARKS:

Tests generated during examination are being returned in FDLE Items 1.1, 3.1, 5.1, 7.1, 9 and 15.

The method of testing for ammunition components (that have results that fall into the range of conclusions defined below) included physical examination and microscopic comparison. Elimination results that are reported as *based on a difference in class characteristics* include only physical examination.

- **Identified:** Agreement of all discernible class characteristics and sufficient agreement of individual characteristics where the extent of agreement leads to the conclusion that the items were fired in/from the same firearm.
- **Inconclusive (+):** Agreement of all discernible class characteristics and some agreement of individual characteristics but insufficient for an identification.
- **Inconclusive:** Agreement of all discernible class characteristics without significant agreement or disagreement of individual characteristics; therefore, the items could neither be identified nor eliminated as having been fired in/from the same firearm.
- **Inconclusive (-):** Agreement of all discernible class characteristics and some disagreement of individual characteristics, but insufficient for an elimination.

- **Eliminated:** Significant disagreement of discernible class characteristics and/or individual characteristics leading to the conclusion that the items were not fired in/from the same firearm.

No Value for Microscopic Comparison: The item was examined visually and microscopically. It lacks sufficient individual characteristics for microscopic comparison to other items.

The submitted item(s) will be transferred to the Evidence Section for return to your agency.
